PreDiligence

Accel · Future Founder Challenge
Data-Centric Agents · Paris

The AI analyst that turns a startup name into a sourced pre-call memo in 2 minutes, and flags what the databases got wrong.

WHO IT'S FOR

- **Analysts and partners at pre-seed and seed funds**, who screen hundreds of startups a month.
- Each first look takes **2 to 4 hours** of research on public data that is scattered, stale and contradictory.
- Incumbents serve PE, not seed: DiligenceSquared charges **~$50k per project**.

WHY NOW

- **Live web search built for agents** is now cheap and fast (Keenable).
- LLMs can finally **extract and cross-check facts**, not just summarise.
- The market pays: Rogo passed **$50M ARR**, and Accel co-led **Bridgetown Research's $19M Series A**. Nobody serves early stage.

FIRST USERS

- **The VCs in this room**: free pilot from tomorrow, on their real deal flow.
- Paris seed funds, scout programs and angel networks, through warm intros.
- A weekly public post: **"what the databases got wrong this week"**. Then €200–500 per seat per month.

HOW IT WORKS · DATA AT THE CORE

Keenable live web + X → Planner → 4 research agents → Fact extractor → Verifier → Memo + 5 call questions

Aiven PostgreSQL is the memory. Every fact is stored with its source, date and confidence. No source, no fact. The primary source beats stale databases, and every re-check shows exactly what changed.

PROOF

"Active"
YC directory, PitchBook and Tracxn on Menza (YC W26)

"Acquired"
PreDiligence found it on Menza's own blog, with the source and date
